RESULT 1
          9A170763
```

The present sequence is that of the coding region of the csaB gene of enterotoxigenic Escherichia coli (STEC) strain B11881A. The csa operon (see AAI70780) was isolated from a genomic library of this strain. Sequencing revealed 5 contiguous genes, csaA-csaE (see AAI70759-63),

                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
flanked by 2 insertion elements. The csa operon encodes the synthesis of ETBC-CS4 pill, and has been expressed in attenued Shigapla strain CVD1204 guaBA, constructing the Shigapla expressing CS4 fimbriae vaccine strain CVD1204 (pGA2-CS4). The caaB gene encodes a 40 kDa tip associated protein (CsaD, see AM50341) that shows homology with similar proteins from other ETBC fimbriae. The csa operon, and the csaA-CsaB genes, are useful in the production of recombinant CsaA-CsaB polypeptides that are used in claimed immunogenic compositions to prevent ETBC colonisation,

An immunogenic composition comprising a recombinant product of a csa operon and a carrier, is useful for generating an immune response in a subject, which involves contacting the subject with the immunogenic composition. The recombinant product of the composition is the CS4 antigen (bacterial piil protein) and is provided in an acellular or cellular composition. The nucleic acid is useful for producing a polypeptide product from a csa operon or functional fragment, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'nί
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CsaE; gene; ds; csa operon; CS4 pilus; bacterial pili protein; ETEC; CS4; enterotoxigenic Escherichia coli; multivalent Shigella-ETEC; diarrhoea; Shigella; antibacterial.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   720
involves providing a mucleic acid, introducing the csa operon in an expression vector, such that a recombinant host cell is produced and subjecting the recombinant host cell to conditions such that a protein from the csa operon is expressed. The nucleic acid encoding at least an immungenic portion of the csa operon or a polypeptide encoded by the immungenic portion of the operating an immune response in a vertebrate against ETEC (enterotoxigenic Escherichia coll). The nucleic acid is also useful for penerating an immune response in a vertebrate biological functions similar to that of the csa operon and for creating a multivalent Shigella-ETEC immunogenic composition that will protect from diarrhoea caused by either Shigella or CS4 expressing ETEC strains. This sequence represents DNA encoding a recombinant product of a csa operon, CSaE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480
                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the csa operon of enterotoxigenic Escherichia coli (3TEC) strain E1881A. The csa operon was isolated from a senomic library of this strain. Sequencing revealed 5 contiguous genes, csaA-csaE, the coding regions of which are claimed (see AAI70759-63), flanked by 2 insertion elements. The csa operon encodes 5 proteins (see fambrials structural protein (GaaB), the top associated protein (GsaE), a chaperon-like protein (GsaB), the top associated protein (GsaE), a truncated regulatory protein (GsaB). The csa operon has been expressed in attenuated Shigella strain CVD1204 guaBA, constructing the Shigella expressing CS4 finbriae vaccine strain CVD1204 (196A2-CS4). The csa operon is useful in the production of recorbinant CSaA-CSAE polypeptides that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGTCATACTCTGTATGATAGGATGACTTTTTTATGTTTTGTCTTCTCACAATACACTTAAT 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a bacterial cell expressing three or more coli surface (CS) antigens. The bacterial cell is useful for manufacturing a medicament, i.e. a vaccine, for vaccinetion against diarrhoea. The vaccine is also useful for targetting bacterial infection. The present sequence is Escherichia coli CS4 operon containing cash, csaA, csaC, ISI and csaE gene. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New bacterial cell expressing three or more coli surface antigens, usef
for manufacturing a medicament, i.e. a vaccine, for vaccination against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4616 TITAACTGTAATAAAACGCGGCTTCAGGTGCAAGTTTATATTTATATTTCCTGCTGGC

vertebrate against the enterotoxigenic Escherichia coli Disclosure; Page 35-41; 58pp; English

The invention relates to an isolated nuclectide sequence comprising a csa operon (encoding proteins required for producing CS4 pill) or its functional fragment. An immunogenic composition comprising a recombinant product of a csa operon and a carrier, is useful for generating an immune product of a csa operon and a carrier, is useful for generating an immune commonstic. The involves contacting the subject with the composition. The recombinant product of the composition is the CS4 antigen (bacterial pill protein) and is provided in an acellular or cellular composition. The nucleic acid is useful for producing a collular composition and is useful for producing a collular composition which involves providing a nucleic acid, introducing the csa operon in an expression vector, such that a recombinant host cell is produced and composition of the csa operon or functions such that a protein from the csa operon is expressed. The nucleic acid encoding at least and immunogenic portion of the csa operon or a polypeptide encoded by the immunogenic portion of the csa operon or a polypeptide encoded by the consisting that the interpretation of the csa operon or a polypeptide encoded by the nucleic acid is useful for generating an immune response in a vertebrate against TBC (enterotoxigenic Becherichia coll). The nucleic acid is also useful for identifying polymodecides encoding other proteins with a multivalent Shigella-FIEC immunogenic composition that will protect from cullivalent Shigella-FIEC immunogenic composition that will protect from contents ace assets of a content or sequence represents csa operon related DNA of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gradaccionarciececcinarcecrarranaranaranariacinariacarcecae 3416
                                                                                                                                                                                                                                                                                    AAAAAGATATTTTTTTTTTTTTTTTTTTTTTTTTGCGGGGGTCAGTGCCGGGCGATAC 2762
                                                                         The invention relates to a bacterial cell expressing three or more coli surface (CS) antigens. The bacterial cell is useful for manufacturing a medicament, i.e. a vaccine, for vaccination against diarrhbea. The vaccine is also useful for targetting bacterial infection. The present sequence is Bscherichia coli CSI operon fragment containing cool and cool gene. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            828

The CS2 gene cluster may be used to produce immunogens for vaccinating patients against diarrhocal diseases caused by ETEC activity. This type of enteric infection is a major cause of death among infants in developing countries and in elderly adults. The vaccine comprises more than 1 antigenic determinant (epitopes) from more than 1 pilus type to be effective against more than

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a bacterial cell expressing three or more coli surface (CS) antigens. The bacterial cell is useful for manufacturing a medicament, i.e. a vaccine, for vaccination against diarrhoea. The vaccine is also useful for targetting bacterial infection. The present sequence is Escherichia coli GS operon containing cots, cotA, cotC and cotD gene. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        127 GAATCTTCCCCCAAACATAATATTAAATAACCATATTACAGCATACAGTGAAAGTCAT

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comparises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     438
immunodeficiency, trichthiodystrophy, Panconi's anaemia, solid tumours and cancer, particularly by determining status of cytosine methylation and/or by detecting single-nucleotide polymorphisms. Determination of individual methylation patterns may allow development of individualised therapies. The sequences given in records ABL92192-ABL9235 represent chemically pre-treated DNA fragments from genes associated with DNA repair, and their complements. Note: The sequence data for this patent in not represented in the specification, but is based on sequence information supplied by the Buropean Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                               for detecting cytosine methylations as well as method for ascertaining genetic and/or epigenetic parameters of genes associated with DNA adducts. Oligomers of the invention coupled to a solid phase is useful for manufacturing an arrangement of different oligomers (array) fixed to a carrier material for analysing diseases associated with the methylation state of the CpG dinucleotides of chemically pretreated DNA of genes associated with DNA adduct. They are also useful for ascertaining genetic associated with DNA adduct. They are also useful for ascertaining genetic associated with DNA of genes associated with DNA of genes associated with DNA of genes associated by the predisposition to specific diseases by analysing cytosine methylations. Sequences of the invention are useful for diagnosis and therapy of solid tumours and cancers. They are also useful in gene therapy. The present sequence is chemically pretreated human genomic DNA associated DNA adducts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           320 AAAGAAGTITAATAAAAAAAGAGCTACAAATTAAAGGCTATAAACAATTATTGTTCAAAA 379

Plasmodium falciparum chromosome 2 related DNA sequence SEQ ID NO:272. Plasmodium falciparum; antimalarial; malaria; Hoffman S, Carucci D, Plasmodium falciparum WPI; 2000-365347/31. WO200025728-A2 05-NOV-1999; 05-NOV-1998; 07-NOV-2000 11-MAY-2000 AAA70139; (HOFF/) (VENT/) (CARU/) (GARD/) The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from ne of 346 sequences, and an Oilgomer, in particular an Oilgomotectide or peptide nucleic acid (PNA) collogomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oilgomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status) e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, tuberculosis, developmental disorders, psoriasis, Rieger's syndrome, tuberculosis, developmental disorders, psoriasis, Rieger's syndrome, returnological disorders, immunological disorders, Waardenburg syndrome, syndrome, atthritis, polyglutamine disorders, solid tumours disease, HDR syndrome, atthritis, polyglutamine disorders, solid tumours associated genomic DNA molecules of the printed specification but was obtained in electronic format directly from the European Patent New nucleic acids or oligomers, useful for diagnosing or treating diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction, solid tumors or Claim 1; SEQ ID NO 281; 32pp; English. Berlin K; Piepenbrock C, (EPIG-) EPIGENOMICS AG WPI; 2002-090046/12.

Gardner M, Venter JC;

1056 The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II) (I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisers or a monoclonal antibody raised to immunocens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they .; 0 1116 are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA7078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the 252 312 1057 ACTTGTGATAATAAGAAGTTATGGAAACAGCACAAGTGATATGATAAAAATTTTT 193 TATGATAGGATGACTTTTTTATGTTTGTCTTCTCACAATACACTTAATGGAGCATGTCCA 997 TATTATAATAATATTTTTAAATCCATTAAATGATAATTCAAATAATGTTGTTATTACA 253 ACCAGTGAGAATCCTAGCAGTTCATCGGTCAGCGGTGAAACAATATAACATTACAATTT Gaps Proteins encoded by chromosome 2 of the human malarial parasite, Plasmocium falciparum, useful as antimalarial vaccines and in the diagnosis of P.falciparum infection. ., 4.3%; Score 47.2; DB 3; Length 5139; 44.5%; Pred. 2001-656860/75. P-PSDB; ABB66763 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

Claim 1; SEQ ID NO 27080; 21pp + Sequence Listing; English.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published\_pot\_sequences

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila genome Project (BDCP). The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDCP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegaw and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDCP from the isogenic strain v2; on bw sp, the same strain used for the BDCP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A linear GSS 03-JUN-1999 sequence TET3 end of BAC:

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk -, This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CBPH (Centre dy'stude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

L Submitted (02-UNN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr - Web : www.genoscope.cns.fr : septermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RSCI 98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the

/clone_list strand cDNA was primed with a NotI-Oligo (dr)
primer. Five prime end enriched, double-strand cDNA was
digested with Not I and cloned into the Not I and EcoR v
sites of the pCMVSPGRT 6 vector. Library was normalized.
